

ABSTRACT OF THE DISCLOSURE

A toner comprising a resin binder, a colorant, and fine inorganic particles having a BET specific surface area of $30 \text{ m}^2/\text{g}$ or less, wherein the fine inorganic particles are added as an external additive, wherein the toner has a storage modulus at 100°C using a 25 mm parallel plate of $7 \times 10^4 \text{ Pa}$ or less, a storage modulus at 60°C using a 7.9 mm parallel plate of from 3×10^8 to $1 \times 10^9 \text{ Pa}$, and a storage modulus at 70°C using a 7.9 mm parallel plate of from 7×10^6 to $3 \times 10^8 \text{ Pa}$; and a two-component developer comprising the toner. The toner can be used for the development of a latent image formed in electrophotography, electrostatic recording method, electrostatic printing method or the like.
